

The 1972 Fritz London Memorial Prize Winner

Alexei Abrikosov (Landau Institute of Theoretical Physics, USSR)
<http://www.msd.anl.gov/abrikosov>

Citation:

“For his theoretical work in low temperature physics, especially the discovery of type II superconductivity, and for his work on the theory of superconducting alloys, especially the concept of gapless superconductivity, the theory of Fermi liquids, the application of field-theoretic methods in statistical physics and contributions to the theory of dilute magnetic alloys.”
