

The 1990 Fritz London Memorial Prize Winners

Anatoli I. Larkin (Landau Institute for Theoretical Physics, Russia)

http://en.wikipedia.org/wiki/Anatoly_Larkin

Citation:

“For his important contributions to the theory of thermal and quantum fluctuations at low temperatures, including his work on fluctuations in superconductors, on flux-lattice and charge pinning, on weak localization, and on quantum tunneling, as well as his work on phase transitions in dipolar systems, which pioneered the use of the renormalization group for calculation of critical exponents.”
